

Lin, Wen-Hsu
Institute of Health and Welfare Policy

RESEARCH DESCRIPTION

My research focus on adolescent health. Mainly, I apply adverse experience/stress model and life course perspective to understand the short and long term effects of early stress and social context (family and community) on health and risky behavior. For health, I am interested in mental and social health; and for risky behavior, my concern is on addictive behavior and risky sexual behavior. Furthermore, my research mostly employs quantitative research method, including multilevel model, growth curve model, mixture model. In addition, I am also interested in applying counterfactual model to find the “causal” relationship between risk factors and health.

RESEARCH INTERESTS

Adolescent health and development
Social context and risky behavior
Applied quantitative research
